DAY 23 | ONE-PAGER

Industry Use Cases and Maturity

NEW (v4). A quick reference for Session 1. Examples are illustrative, not customer results.

Prepared by **Ahmed** | linkedin.com/in/ahmed-al-imaad

GenAI use cases by industry

Industry	Good first use cases	Main risks
Telecom	Care assistant over approved FAQs; ticket triage; incident summaries	Customer data; wrong outage or billing information
BFSI	Form and claim extraction; compliance search	Regulation; explainability; data residency
Retail	Product content; semantic search; support chat	Brand tone; wrong prices
Healthcare	Clinical note drafts for review; patient FAQs	Patient safety; privacy
Manufacturing	Maintenance manual search; quality reports	Unsafe instructions; IP

Maturity levels

Level	To reach the next level
Experiment: demo, no real users	A real problem, a sponsor, a baseline metric
Pilot: small group of real users	Measured win, owner, evals, security review
Production: SLAs and monitoring	Shared platform, cost controls, reuse
Scaled: many teams	Guardrails and approvals for agent actions
Agentic: agents act with tools	Continuous evals, red-teaming, audit

Do's and don'ts

Do	Don't
Use only data you are allowed to use; minimise personal data	Paste customer data or secrets into prompts
Keep a human in the loop for money, safety and rights	Let an agent act on high-impact decisions alone
Tell people when they deal with AI; label AI content	Hide AI-generated content or decisions

Transparency: EU AI Act Art. 50 (tell people they deal with AI; mark AI content) and Japan AI Business Guidelines v1.2 (voluntary, risk-based). Check current official sources. Not legal advice.
